

plate ice machines

why choose a snowkey machine?

You can depend on the *state-of-the-art* Japanese designs from the world's largest ice-making and water chilling manufacturer, Snowkey.

The technology and quality of product has earned a strong reputation overseas, which reflects our own high standards for performance excellence.

We also know that the Australian climate is significantly different to the machine's origin.

This is why our Australian engineers have worked with Snowkey in China to fine-tune the ice machines for Australian specific conditions.

Our emphasis is in the development of cutting-edge machines that result in efficient operation for your business, no down time and long-term energy savings.

We have the largest range of ice machines in the world.

Our staff will ensure that your machine suits your individual needs, and provide you with support before and after your purchase of any of our products.

Our experience and knowledge will help to match the perfect size machine to your business, to achieve our prime goal of total customer satisfaction.

Our clients include those working with:

- ✓ Seafood
- ✓ Poultry & Meat Processing
- ✓ Smallgoods
- ✓ Leather Processing

The Snowkey plate ice machines produce a clear, hard cracked ice with a size range of 5mm to 30mm.

It creates this by pumping water from a reservoir to a distributor above the plate. Water then is passed uniformly over a vertical stainless steel plate, which chills the ice. Depending on the thickness of ice you require, the water pump will switch off, and a hot gas will release the ice plate onto a rotating breaker bar.

Your cracked plate ice is stored in a container under the machine, and is immediately ready for use!

At Snowkey, our passion is to provide you with high quality products with results that will please, every time.

Give us a call today and we can discuss ways that our machines can benefit your business!

“ More Uptime or We'll Replace It “

features:

✓ Quality of Construction.

Our machines feature an ice-making section and compressor set assembled from a hot-dipped, galvanized frame.

All surfaces and plates in contact with ice are made from 304 stainless steel, which resists heat and eliminates corrosion.

The external housing of our machines are weatherproof and tamperproof.

✓ Capacity

Snowkey plate ice machines have a range of 1 to 100 tonne capacity.

✓ Electrical Control

All plate ice machines are fitted with PLC control phase failure circuit breakers, as well as overload and contactor controls. Plus a full set of 'run' and 'fault' lights.

✓ Suitability

Plate Ice Machines are suitable for refrigerant R404A, R22 and R717
