

tube ice machines

Our clients include those working in:

- ✓ Hospitality
- ✓ Bagged Ice Suppliers

It's clear texture means it is often referred to as 'cocktail ice'.

Water is circulated from a reservoir over the inner surface of the stainless steel tube. Ice is formed by a refrigerant being applied to the outside of the tube. When your desired thickness is achieved, a hot gas will be introduced, which releases the ice. This drops into a rotating blade, which cuts your ice and discharges into a storage container for use.

Snowkey tube ice machines produce great looking ice, which is clear and tasteless.

We can guarantee this as our machines filter salts and impurities during their harvest cycle. These impurities are discharged as waste at the end of a cycle, and fresh water fills the reservoir to begin the process again.

At Snowkey, our passion is to provide you with high quality products with results that will please, every time.

Give us a call today and we can discuss ways that our machines can benefit your business!

why choose a snowkey machine?

You can depend on the *state-of-the-art* designs from the world's largest ice-making and water chilling manufacturer, Snowkey.

The technology and quality of product has earned a strong reputation overseas, which reflects our own high standards for performance excellence.

We also know that the Australian climate is significantly different to the machine's origin.

This is why our Australian engineers have worked with Snowkey in China to fine-tune the ice machines for Australian specific conditions.

Our emphasis is in the development of cutting-edge machines that result in efficient operation for your business, no down time and long-term energy savings.

We have the largest range of ice machines in the world.

Our staff will ensure that your machine suits your individual needs, and provide you with support before and after your purchase of any of our products.

Our experience and knowledge will help to match the perfect size machine to your business, to achieve our prime goal of total customer satisfaction.
